

UNIVERSITÄT
KOBLENZ · LANDAU

Web Science is a novel discipline at the frontiers of several scientific disciplines targeting the understanding of the Web and its users and the development of original technologies. The institute for Web Science & Technologies – WeST – focuses on Web research around topics such as Web retrieval, social Web, Semantic Web & interactive Web. For a new cooperation project starting in fall 2010 we have several openings for

Researchers at the level of PhD students or PostDocs

The tasks aim at analyses of online communities. The research areas comprise data management in a cloud infrastructure, social simulation of communities and data mining based on real-world data from our corporate partners.

We look for candidates with an excellent master's degree or PhD pursuing academic qualifications or careers. The ideal candidate can demonstrate analytical capabilities, scientific curiosity, excellent programming skills and experiences related to at least one of the research areas.

We offer a creative, internationally renowned research group, support with publishing at selective conferences, support for acquiring the PhD or habilitation, a new, technically outstanding campus, as well as one of the nicest places to live in Germany.

Contracts are of limited duration according to law, WissZeitVG. Renewal may be possible. Applications by social groups that are underrepresented at the university are specifically encouraged.

Please find further details at <http://west.uni-koblenz.de> or by calling the director of the institute, Prof. Dr. Steffen Staab. Tel: +49 261/2872761. Applications should be by email only and **only** to Mrs Werger (werger@uni-koblenz.de). Applications received by **April 22, 2010** will be processed with highest priority.
