Study at your university and receive an additional Master from us!

Online Double-Master-Degree
M.Sc. Environmental Sciences
Environment in context

M.Sc. Ecotoxicology
Environmental Chemical Management
Do you want to join a double-master program in the field of environmental sciences?

- Get a second international master-degree during an online master-program from the University Koblenz-Landau, Germany.
- Stay at your home university and study home and abroad.
- Benefit from high quality content through expert teaching.
- Stay in contact with lectures via individual contact options.
- No relocation, no visa!
- Profit from an international contact network.
What is a double-master-degree?

Double-master degrees offer qualified students to get a Master of Science degree both at their home university and at the University of Koblenz-Landau, Germany. The goal of the double-degree program is to allow students to gain from study contents of two partner universities and get an international master degree from both universities. The content of the respective master programs are specifically set up to complement each other.

Students from partner universities registered for a master in the field of environmental science, natural sciences, environmental engineering, environmental chemistry or equivalent fields can apply for two different master programs at the University of Koblenz-Landau:

M.Sc. Environmental Science
- Environment in Context

M.Sc. Ecotoxicology
- Environmental Chemical Management
Environmental Sciences

Interdisciplinary and hands-on – Environmental Sciences is an interdisciplinary field covering the many interactions between natural and human systems on multiple scales, from molecules to landscapes. In addition to knowledge in the natural sciences, Master students in the Environmental Sciences program gain an indispensable and solid understanding of the social sciences (e.g. economics, politics, management). With a unique blend of theoretical courses and hands-on practical experiences, students develop abilities to analyze and solve complex environmental problems in an interdisciplinary context.

The Institute for Environmental Sciences in Landau, Germany offers an excellent program of study by combining expertise from Biology, Chemistry, Physics, Geocology and the Social Sciences.

Environmental Chemical Management

Today, an increasing number of chemicals is used by humans some of which are also released into the environment. Environmental Chemical Management (Ecotoxicology) is concerned with their potential impacts on the ecosystems.

This emerging field of science investigates effects of chemicals on biological systems in order to develop methods for risk assessment and management as well as to predict ecological consequences.

The international double Master of Science program in Environmental Chemical Management integrates concepts of Environmental Chemistry, Toxicology and Ecology and also the Social Sciences and Environmental Economics. Due to its interdisciplinary and applied approach, the program enables its graduates to analyze complex problems and to develop practical solutions.
Who can apply?

We are looking for highly motivated students interested to strengthen their knowledge of environmentally relevant problems using an interdisciplinary approach.

Prerequisites

- A bachelor degree in environmental sciences (or an equivalent program with a focus on e.g. natural sciences and applied mathematics) with a minimum final grade of “good” (e.g., 2.5 on a 6.0 scale).

- Students from partner universities have to be registered for a master program in environmental science, environmental engineering, natural science or related fields.

- English sufficient to follow the online courses.

Application information

- The program starts in the winter semester (October) and in the summer semester (April). You should be in your third semester.

- General information about applying to the program can be found under: www.double-master-envir-ld.de
The study concept

Students from partner universities will be additionally registered at the University of Koblenz-Landau for three semesters (one year and a half). The complete master programs will be in English and is provided via online modules. The students can continue their studies at their home university while participating in the online courses and do not have to relocate to Germany. The students’ are supervised by their teachers via an online platform and can get into regular contact with teachers and supervisors during online consultation times.

The content of the double master will be composed according to the students background. All exams will also be conducted at the home university.

The overall costs for the double-master-degree program will be around 600€ per year including university registration fees.

Why apply for the double-master?

1. Get an international double-master-degree from your home university and the University of Koblenz-Landau, Germany.

2. Degree program with a future – Through climate change, altered land uses and an increasing human population, ecosystems are being continuously stressed. Environmental concerns and more stringent laws provide job opportunities for environmental science experts.

3. Excellence in research and teaching – Our lecturers are involved in international collaborative research projects and participate in governmental advisory groups. This means they are able to incorporate the very latest developments in their teaching.

4. No travelling costs and no visa necessary!

5. Contact and interaction – Students develop their individual strengths and interests through close contact with teaching staff.

6. Moderate costs – German universities are state-funded, therefore no tuition fees are charged. You only have to cover a semester fee and a student health insurance of approximately 600€ per year.

7. Support for international students – Individual contact options and individual student assistance by teachers and program assistants.

„The Environmental Sciences Program in Landau is varied. You are exposed to information from all the natural sciences that, for me personally, was fun and very interesting. This interdisciplinarity is a huge advantage for a scientific career. As a polar researcher, the training has helped me to quickly adapt to new environments and take on new challenges daily.‖ (Christian Wolf, Graduate, doctoral student Alfred-Wegener-Institut)
Examples of offered subjects

- Complex Data Analysis
- Environmental Cost-Benefit Analysis
- Environmental Economics
- Environmental Management
- Environmental Modeling
- Environmental Statistics
- Environmental Toxicology
- Geographic Information Systems
- Risk Assessment & Management
- Spatial Ecotoxicology
- Stress Ecology
